

# RESPIRATOR Fitseal™

Breathe with **confidence.**

## The Next Generation of Advanced Filtering Facepiece Respirators

### Unsurpassed Personal Respiratory Protection

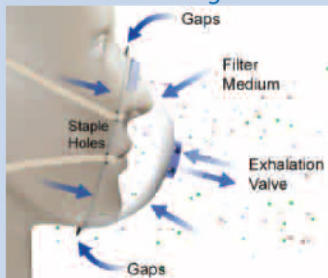

The Fitseal™ one-size-fits-all adhesion respirator is designed and engineered to provide unsurpassed protection from disease causing bacteria, viruses and toxic dust particles.

The Centers for Disease Control (CDC) has stated, "Face-seal leakage is the weak link that limits a respirator's protection ability."

The patent pending Fitseal™ conformable adhesion technology molds to all facial contours to form a state-of-the-art secure barrier between the respirator and the face (the face-seal). This technology minimizes the problem of

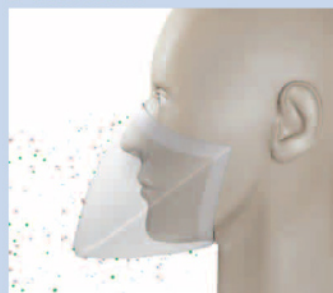

hazardous inward leakage common to conventional respirator designs, that are held in place by facial pressure exerted by straps or rubber bands.

#### Conventional Design

Conventional respirator design allows harmful airborne particles to bypass the filter element.

#### Fitseal

Fitseal™ Adhesion-Technology minimizes inhalation of harmful airborne particles.

### State-of-the-Art Filtration Medium

- Advanced, two-way multi-layered filtration medium captures over 99% of toxic, allergenic and infectious airborne particles
- Extremely low particle penetration of 0.3 micron-sized particles at an airflow rate of 85 L/min (Test results show an average penetration 30 times less than the 1% allowable N99 standard)
- Puncture, crush and fluid resistant
- No need for an exhalation valve that can spread infectious particles to those nearby
- Can be worn for up to 8 hours

### Universal Fit: One-Size-Fits-All

- One-size-fits-all design readily conforms to all facial contours providing a universal fit
- Eliminates the need to procure, re-test and inventory multiple styles, sizes and makes of conventional respirators

- Designed to fit the general public intuitively when fit testing is not available
- Simplifies fit testing procedures (reduces time and cost)
